Comprehensive Concussion Care

Comprehensive Concussion Care is a clinic unique in its goal of providing a multi-systems approach to the diagnosis and treatment of concussions. We utilize advanced assessment techniques that look at the brain's response to a mild traumatic brain injury (mTBI) by testing the ocular, vestibular, proprioceptive, neurocognitive, cardiovascular and emotional domains of each patient. This allows our providers to generate a unique concussion diagnosis and a very specific treatment plan.

C3 brings together a team of physicians and physician assistants certified as concussion consultants with unique training in the management of concussions. This team of professionals work along with vestibular therapists, occupational therapists and athletic trainers all in one facility.

There is no other clinic like us!

We are currently accepting referrals and most major insurance plans. We are located at:

**11940 West 119th Street
Overland Park, Kansas**

Our team of medical professionals offer the following services:

- Medical evaluations by certified concussion consultants
- Vestibular, balance, and proprioception testing and rehabilitation
- Computerized neurocognitive testing with ImPACT© applications software
- Graded cardiovascular exertion assessments and workout planning
- Functional vision testing and rehabilitation
- Screening test for situational mood disorders and overall behavioral health
- Staged recovery plan and management of return to work, school and sport
- A required 5-phase “test out program” before full release to return to play
- Specialty partnerships with neuro-optometry and neuropsychology

Why See Us

Concussion symptoms can last from 5-7 days but may continue for 2-3 months or longer. Rest is initially helpful but may not be enough. In some cases, rest and isolation or pushing through symptoms can actually make things worse. Days can become weeks and you may be wondering if you are ever going to make it back to school, work or to sports again. Are you stuck dealing with this on your own or is there a clinic that can offer you answers, a more specific diagnosis and a treatment plan to full recovery?

Our Approach

C3 is committed and dedicated to providing cutting edge and personalized care to all types of patients who have suffered a concussion. Patients that schedule an appointment with us will not only complete their assessment and testing on their initial visit, they will also receive a diagnosis listing their specific type of concussion, get an estimated length of recovery, a rehabilitation plan, a school/work recovery plan and they will begin specialized therapy **all on the same day!**

Baseline Concussion Testing

C3 also offers baseline concussion testing for athletes and for employees in the workplace. ImPACT© and other screening tests are performed and stored for use if a future head injury is sustained. This baseline information can be very helpful in assisting our providers in managing the care of each concussion and the overall return to work, school, play and life decisions.

Comprehensive Concussion Care is a unique clinic with experience in the diagnosis and management of all types of concussion complications in athletes, employees, and regular citizens. Make the best choice if you sustain a concussion,
